

All of the programs that XM Satellite Radio broadcast are top quality and extremely beneficial to us as subscribers. The new traffic and weather channels are especially important as they provide valuable information that no other station or network provides.

I am paying for the content that I receive. Due to that fact, I feel that any and all outside interests or competitors do not have any say nor do they have the right to limit my listening experience. If the content on the outlets seeking to limit XM were of equal or superior quality to that presented on XM then I wouldn't have subscribed. They are not anywhere close! XM should be allowed to continue without interference.
